

KASC Safety Awareness Meeting on January 15, 2008

The meeting was called to order by Gene Faxon and the opening prayer was given. The guest speaker was Randall Chase with TOSHA. He spoke briefly on the CFR 1910.132 and NFPA 70E, but most of the topic was on case studies and the relevance of behavior-based safety. Randall shared several cases he has been involved in and the root causes of major injuries and fatalities. He stressed how equally important it is to use positive reinforcement when workers are doing things right. Most companies are safety-conscious, but the employees need to be committed to safety also. He received a gift from the council, and the meeting was adjourned.
